

▸ AISCO HACKATHON · ALAMEDA COUNTY COMMUNITY FOOD BANK

Perishable Rescue + Equity Coordinator

Five specialized agents replace the manual decision bottleneck at a food bank —
safety-first, equity-aware, and it learns every run.

Deterministic + LLM · Live demo → rescue.intrudr.io

THE PROBLEM — 01

► NO SHORTAGE OF FOOD — A SHORTAGE OF TIME & COLD-CHAIN

70M tons

U.S. food surplus in 2024 — ~29% of the supply. Only **13%** of donatable food is donated.¹

~80%

of wasted food from farms & businesses is **perishable** — meat, produce, dairy.²

60M lbs

distributed by ACCFB in 2024 · 400+ agencies · **11.6M lbs** fresh food rescued.³

0 h — 48 h

Berries & greens spoil in **hours**; raw chicken is safe only **1–2 days**.⁴ Short on cold storage and reefer trucks, fresh food spoils on the dock — paid for, then thrown away.

1 · ReFED 2024 U.S. Food Waste Report. 2 · Feeding America. 3 · ACCFB 2024 Annual Report. 4 · USDA FoodKeeper.

182,080

Alameda residents are food insecure — **11%**, up from 9.6%.⁵ ACCFB's lived-experience figure: **1 in 4**.³
Hunger concentrates in historically **redlined** East Oakland & Fruitvale.⁶

Demand drift

Agencies re-order bread out of habit → the desk "honors the last order" → fresh food expires while bread ships → the **wrong food mix quietly locks into the highest-need blocks**.

ROOT CAUSE — A decision bottleneck, not a food shortage. A standing order is a **flawed signal**; one operator can't weigh spoilage, equity and trucks at once under time pressure.

THE SOLUTION — 01

► FIVE AGENTS, ONE CONSTRAINT EACH — FACTS VS JUDGMENT

Deterministic — physics

Spoilage math, truck capacity, cold-chain, route feasibility. Same answer every time — **safety is never reasoned away**.

LLM — judgment

Who needs it most, correcting demand drift, multilingual notices. A single blurred prompt would **silently drop one of these**.

Learning layer — Risk & Need read past lessons before deciding; the system writes new patterns after every run. Never crashes: every step has a rule-based fallback. **Run #1 is good; run #100 is exceptional.**

THE SOLUTION — 02

► LIVE-DATA READY — SWAP THE ADAPTER, NOT THE CODE

AGENT NEEDS	TODAY (DEMO ADAPTER)	LIVE SOURCE — JUST POINT THE CONNECTOR
Inventory lots	inventory.csv	Warehouse / inventory system (WMS) feed
Trucks & cold-chain	routes.csv	Route & dispatch / fleet system
Agencies & need	agencies.csv	Partner directory / CRM + equity data
Shelf-life rules	USDA FoodKeeper	Already the real government feed ✓

Intake is the single data entry-point; every downstream agent consumes clean typed records and doesn't care where they came from. Reasoning, safety gate and learning stay **identical** — **it's a connector change, not an architecture change**. Already live, ~\$0.001/run, and runs with no API at all via the fallback.

► THE DEMO — WATCH IT WORK

See five agents run, live, in 20 seconds

rescue.intrudr.io

Hit **Run pipeline** and watch each agent light up, explain itself with a real example, hand off the data, then produce the rescue plan, the multilingual notices, and a **live side-by-side against the status quo**.

real OpenRouter LLM calls · rule-based fallback if the API is down

THE PROOF — COMPUTED ON EVERY RUN

► MULTI-AGENT VS THE STATUS QUO — SAME DAY, SAME DATA

METRIC	STATUS QUO (MANUAL DESK)	MULTI-AGENT PIPELINE
Rescue rate	71%	92% +21 pts
Spoiled on warm trucks (cold-chain ignored)	1,100 lbs	0 lbs — flagged
Delivered to highest-need agencies	0 lbs	2,600 lbs

SAFETY HOLDS — It's not 100% by design. It refused to put 300 lbs of raw pork on a non-refrigerated truck and flagged it for manual handling.⁴ **Physics wins over vibes.**

Status quo = honor standing orders • nearest truck • no gating. 4 • USDA FoodKeeper — poultry requires cold-chain.

► SOURCES — EVERY NUMBER IS GROUNDED IN PUBLIC DATA

- 1 **ReFED — 2024 U.S. Food Waste Report.** 70M tons surplus (~29%); ~13% of donatable food donated. refed.org
- 2 **Feeding America — "Reduce Food Waste".** 4.1B lbs rescued FY2024; ~80% of wasted food is perishable. feedingamerica.org/our-work/reduce-food-waste
- 3 **ACCFB — 2024 Annual Report.** 60M lbs distributed; 400+ agencies; 11.6M lbs rescued; "1 in 4" lived experience. accfb.org/annual-report-2024
- 4 **USDA FSIS — FoodKeeper data.** Shelf-life for 400+ items; raw poultry 1–2 days, cold-chain required. [catalog.data.gov · fsis-foodkeeper-data](https://catalog.data.gov/dataset/fsis-foodkeeper-data)
- 5 **Feeding America — Map the Meal Gap 2023** (via Healthy Alameda County). Alameda 11% = 182,080; CA 13.7%, U.S. 14.5%. healthyalamedacounty.org
- 6 **ACCFB — "Roots of Hunger" (redlining).** Hunger concentrated in historically redlined East Oakland & Fruitvale. accfb.org/redlining
